

PEEL FOREST ESTATE

Velvet Genetics Sale

Sunday, 7th January 2024
Viewing 12pm, Auction 1pm

PEEL FOREST ESTATE

An estate of excellence

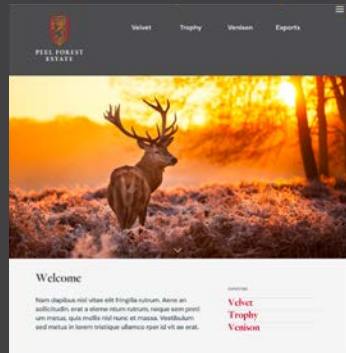

Our commitment to this industry has not wavered in the 35 years since Graham Carr originally set up Peel Forest Estate.

Most industries are cyclical in nature, and ours is no different. It needs a special kind of determination to keep the faith, and a firm commitment to ride out the difficult times to come out better in the good times.

Our determination and success is captured by a very simple philosophy, a quest for excellence in all we do. From innovation through genetics, to animal husbandry techniques, and responding to changing market demand and value-adding opportunities, we continue in our quest for excellence.

That's what our new brand is all about. We're proud of our new look because it sets us up for our future development, both here in New Zealand and export markets. Importantly it serves as a constant reminder that good enough isn't in our ongoing search for excellence – in everything we do.

Welcome to the 2024 Velvet Sire Sale

I can't speak for all regions of the country, but in our area we've been experiencing a rather cold and wet spring, and what one might call a subdued summer! Fortunately, we've managed to create a significant amount of supplement in preparation for what's expected to be a dry season ahead, although these cloudy forecasts make it difficult to see the dry ahead. Nonetheless, all our livestock have come through the season well, and it seems our commercial herd's velvet yields are up from the previous year. This is somewhat of a bonus considering the reduction in velvet prices we're experiencing this year.

As most of you are probably aware, there are looming restrictions on exports to China. Yes, it's a real concern, but I firmly believe new protocols will be in place before next season, allowing us to continue exporting frozen velvet to China. However, we, as an industry and country, have some serious work to do for this to happen.

This year's lineup that we've offered is very clean, and the stags have all the characteristics we believe are necessary for being used as Sires in your herd. I know I keep stressing the importance of traditional grade velvet, but I cannot emphasize enough the importance of maintaining your breeding hinds' ability to produce high-grade velvet. It's incredibly difficult to breed out unattractive style from your herd, but far easier to consistently inject a clean style in. The average of the sale lineup this year is 7.77kg (last year's was 7.76).

You might have noticed that we've also offered 2x 4-year-old stags this year, so keep an eye out for these in the catalogue. Also, this year's sale stags do not include any progeny

from our Embryo Transplant program due to COVID's impact on our operations that year. However, this setback hasn't affected our ability to select and offer quality stags for sale.

Our new Sires this year include Rangi, Husky, and Boris. Rangi is producing some remarkable velvet for us, and we've retained one of his sons this year that cut 10.32kg. Husky is leaving behind very clean, correctly-styled velvet and is blending exceptionally well with the Windermere bloodlines.

Please scan the QR code to view the 360-degree videos of the velvet or click on the link if viewing the online version of the catalogue. This will enable you to see every angle of the velvet, which is crucial if you're choosing to buy online via the BIDR platform. Photos simply don't do justice to these heads, so please check out the videos or join us on the day to see them in person.

We're looking forward to seeing you on the 7th of January.

Regards,

Mark Tapley

Ground breaking Johne's research at Peel Forest

The annual cost of Johne's disease to the New Zealand deer industry in 2011 was estimated at least \$8.8 million. Even more importantly, the cost of Johne's disease on farms with heavily affected deer herds can be huge, ruining the profitability of your deer unit.

For the last ten years Peel Forest Estate has made a serious commitment to breeding Johne's Resilient deer on the property and is leading the way with an industry breaking research project with Dr Frank Griffin, Head of Microbiology at the University of Otago.

There have been huge gains in the research by not only reducing the presence of Susceptible animals but more importantly identifying Resilient bloodlines. This breakthrough is even more important due to the fact Colin Mackintosh from Agresearch has identified the powerful heritability of either Susceptibility or Resilience to Johne's in deer. The heritability of the Johne's resilient trait ensures the ability of Peel Forest Estate stags to fight the disease on our client's properties.

In Colin Mackintosh's paper following his trial on heritability he comments "the offspring of the S (Susceptible) sire was significantly more severely affected than those of the R (Resilient) sire. Most of the Resistant, but not the Susceptible, showed evidence of resolving lesions and a reduction in M.A.P (Johne's) after challenge". The paper went on to say "the 5 male offspring gained significantly more weight than the 9 S offspring over the 49 week study (70.3kg versus 59.8kg) despite being

2.8kg lighter at the start". This difference was statistically significant and even more significant because the S sire had a higher breeding value for 12 month weight.

Further to this research Peel Forest Estate are now going to look into the possible improvements to meat yield and quality from progeny with Johne's resilience as well as the proven on farm productivity benefits.

All stock at Peel Forest Estate are continually challenged by Johne's which has resulted in a radical test-cull, natural and genetic selection for Johne's resilience. The heritability of the Johne's resilient trait ensures their ability to fight the disease on your property.

Sire stag care and management

Sires are the most valuable animal in the deer herd. They carry the genetics that will determine the future production of your herd. The welfare and 12 month health programme cannot be compromised if you wish to get the best from your sires.

On arrival

Stress is at a high level when your new stag arrive at your property. He has left familiar surroundings and mates he has lived with in a social group of around 40 animals of the same age. His arrival can be made a lot less stressful if you follow a few simple rules.

1. Your stag should arrive as early as possible to settle in (preferably before February)
2. Having a few animals in the yard when the stag is unloaded is important.

He should be introduced to a small group of similar age (10-15 animals). Never put with older stags or spikers. Ideally if the hinds he was to mate were nearby he could go directly into the mob. Early fawns should always be the aim.

The roar

A 3 year old stag will mate 40-50 hinds comfortably if he does not have to travel too far or has no competing stag nearby. When you put your stag out is your choice (the earlier the better) but be aware it can take 5-10 days to be accepted into the mob before he begins mating.

It is possible to mate far more hinds than this but you risk a greater spread over calving and marked loss in body weight and performance in a young stag.

When the stags are taken out of the hinds minimize fighting by preparing a safe paddock (with plenty of feed, shade and water) by taking the most dominant stag (older) first. Avoid a very hot day.

Do not put stags used for mating with ones that have not been as this can cause excessive fighting.

Animal health

Your stag will have been drenched and coppered before leaving Peel Forest Estate.

As soon as the sires have settled down after the roar it is good practice to give them a drench, copper and a mineral booster. Hemo 15 is one option. This should be done no later than the end of May. He is at his most vulnerable state and parasites need to be addressed as soon as possible after the roar.

Online Velvet auction with bidr[®]

This sale will be hosted by bidr[®] (www.bidr.co.nz) as a live-streamed auction, with online bidding and a live-stream available on sale day, as well as the normal on-farm format.

All intending ONLINE purchasers must register on bidr[®] in advance of the sale date, by visiting the website and using the “sign up” button, adding their contact information and nominating the agency they would like to purchase through and account held with that agency.

The bidr[®] team is always available to help purchasers get signed up and registered, and the HelpDesk is proudly managed in-house from Hamilton.

Please call 0800 TO BIDR (0800 86 2437), or email enquiries@bidr.co.nz for assistance at any point.

Alternatively, contact your local bidr[®] representative:

Conditions for sale

Sale will be conducted in accordance with conditions of sale as set down by South Canterbury Stock and Station Agent's Association, copy of which is exhibited at sale venue, and other terms set out in this catalogue.

Deer will be offered as catalogued, subject only to final draft. Intending purchasers are required to register at the office prior to commencement of sale to obtain buyer's number and advise appropriate stock and station agent.

Each lot shall become the property and responsibility of the purchaser on the fall of the hammer.

Terms are strictly cash unless prior arrangements are made with one of the selling agents.

Sale will be conducted GST exclusive.

Purchaser must give complete delivery instructions to the office, using one of the delivery instruction sheets in the back of this catalogue and receive delivery docket before removing animals.

The vendor will offer a commission of 4% to non-participating companies. Notice should be given in writing to the vendor 24 hours before the commencement of sale.

Special conditions

No animals, embryos or semen sold by Peel Forest Estate or their germplasm, any subsequent progeny or germplasm, including the semen and germplasm of that progeny, may be supplied to any third party without the written permission of Peel Forest Estate.

This condition does not affect normal commercial deer farming or stud farming or their normal sales of semen or embryos as it only applies to entities with the primary function of commercial semen/germplasm activity.

It is a condition of sale of any animals, embryos, or germplasm or semen sold by Peel Forest Estate, that the purchaser agrees to include the following clause as a condition of any subsequent sale or gift of any animal, embryo, semen, germplasm or subsequent progeny or germplasm to a third party – "the purchaser acknowledges that it will not supply any animals, embryos, semen or germplasm to any commercial semen/germplasm marketing or sales entity, and will ensure that this clause is inserted as a condition of any sale or gift of any animals, embryos, semen or germplasm".

Sale

Animals will be penned by 11.30a.m. on the day of the sale. All stags will be velveted

which will remain the property of Peel Forest Estate.

Certificates

Certificate copies of TB accredited free status, Johnes Clear Test and pedigree will be provided to the purchaser and are available for inspection by all potential clients.

General insurance

Insurance facilities will be available at the office.

Herd health status

Peel Forest Estate has completed a re-accreditation TB whole herd test. We have a C10 plus status. All stags have received a veterinarian physical testicular examination.

Guarantee

Should a stag prove to be infertile from natural causes it will be replaced. In all events the Seller will not be held responsible for loss of production or consequential losses on any animal sold. Notification of any dissatisfaction must be made within 12 months of the date of sale. Subject to these terms, the vendor makes no warranty about any animal sold.

Disclaimer

While these details are prepared with the greatest of care Peel Forest Estate accept no responsibilities for omissions and missed descriptions.

Using DEERselect EBVs

What is DEERselect?

DEER Select is the genetic evaluation system for the deer industry. DEERSelect can assist you in your purchase by providing an indication of the relative progeny performance of each stag. DEERSelect is a simple system to use. Each animal has an individual "Breeding Value" (or BV) for certain traits which are related to economic profitability. By comparing BVs between animals, you can assess the relative merits of animals for different traits.

What do the different BVs mean?

BVs are available for growth and antler traits (the system will be expanded over time to consider other economically important traits). The traits reported are:

How do BVs relate to performance?

BVs are expressed in actual units of production (kg of liveweight or velvet), so are directly related to expected impacts on performance. An animal passes on half of its genes to its offspring (the other half come from the other parent). So if we take an example of 2 stags, one with a 12-month weight EBV of +12 kg and the other of +8 kg, and mate them to the same group of hinds, the first stag will pass on an impact of +6 kg to his offspring, while the second will pass on +4 kg. Thus we would expect the offspring of the +12 stag to be 2 kg heavier at 12 months of age than those of the +8 stag (i.e. half of the difference in breeding value).

12-Month Weight (W12BV)

- gives the animal's genetic merit for weight at twelve

months of age in kg. For example, a W12eBV of +10.0 means that the animal carries genes to make it 10 kg heavier than the base population at 12 months of age. For venison production, this is the trait deer farmers are paid on so should receive significant emphasis if purchasing genetics for venison.

New EBV Conception Date (CDeBV)

Negative value indicates earlier conception and calving date to the average and possibly higher conception rate especially in first calving hinds.

Mature weight (MWTBV)

- This compares the mature weight of hinds (i.e. 3+ years). Again, the values are expressed in kg live-weight. This trait is economically important for both venison and velvet production, as it is an indicator of how much feed is required to maintain an adult animal. Although it is expressed on a breeding hind basis, it is closely related to mature weight of adult stags as well.

This will maximise the profit per hectare of your velvet enterprise by producing more velvet per stag and running stags at higher stocking rates.

This means that if genetics are sought to breed replacement hinds, 12-month weight needs to be balanced with the mature weight to keep hind size (and hence feed costs) at an appropriate level. There may be considerations with handling ability too, depending on your individual preference. Mature weight is not economically important for terminal sires (concentrate on 12-month weight).

Mature Velvet Weight (MVWBV)

This compares the weight of velvet produced by a mature velvet stag - values are expressed as kg of velvet cut at optimal time.

The MVWBV is a significant driver of velvet profitability and should be considered along with likely impacts on velvet grade when comparing animals.

Eye Muscle Area (EMAcBV)

- (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data. This EBV estimates genetic differences in eye muscle area. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs

Weaning Weight (WWTBV) -

The WWTBV gives the animal's genetic merit for weight at weaning, in kg. For example, a BV-WWT of +3.0 means the animal carries genes to make it 3 kg heavier than the base population at weaning.

Carla (CARLARBV)

- CARLARBV is a research breeding value that indicates the individuals' immune response to ingesting infective parasites at around 10 months of age. We do not know exactly if, or how Carla provides protection against parasites in deer, but in lambs a higher Carla response is correlated with lower faecal egg counts (FEC), and lower FEC in turn produces less infective parasites on the pasture.

**PEEL FOREST
ESTATE**

Rangi

Boris

Husky

Koruba

Rawata

Foggy

Ohau

Walton

Fenton

19-2004

Rangi

Birthdate: 2016

Rangi was retained as a 3yr old to remain in the stud after cutting an impressive 10.17 kg of stunning velvet. He came 2nd place in the National Velvet competition in 2019 in the 3yr old section. With his high growth rates, lovely temperament and correct phenotype he is now a pivotal sire for both the Forrester and Velvet lines.

Rangi - 3yrs old

Boris

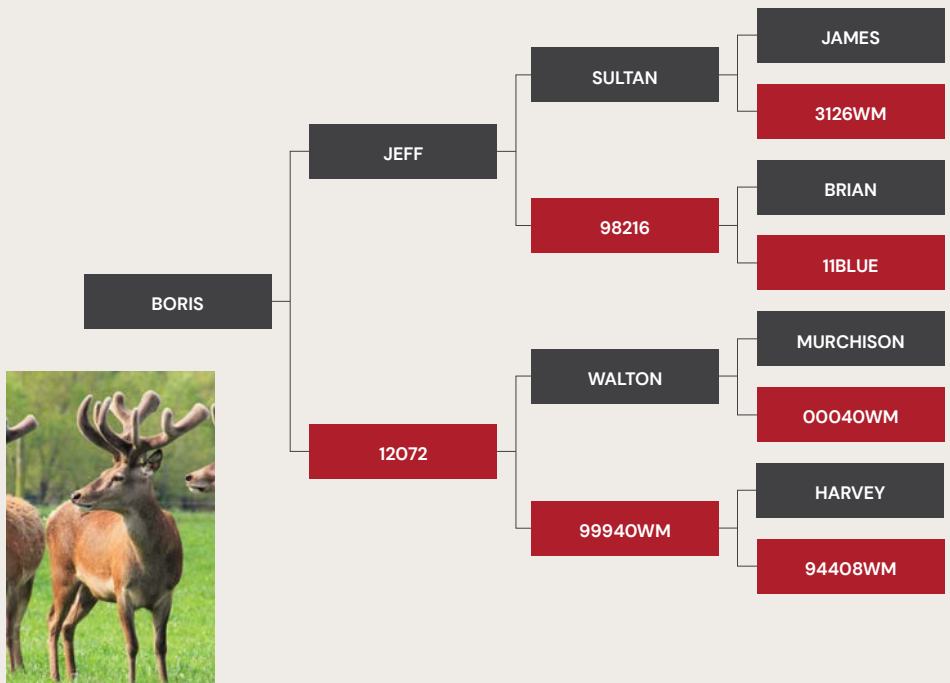

Birthdate: 2016

Boris is a pure Warnham/Woburn English stag that showcased an impressive weight of 10.26kg at the age of 3. Recognizing his exceptional genetics, we chose to retain him as a sire, and the results have been outstanding. His offspring exhibit remarkable qualities.

Boris consistently cuts over 16kg annually, boasting incredible mass and a beam circumference exceeding 30cm. His pedigree is notably impressive, with his dam 12072 playing a pivotal role in our velvet stud. She has been a significant contributor to our Embryo Transfer (ET) program each year.

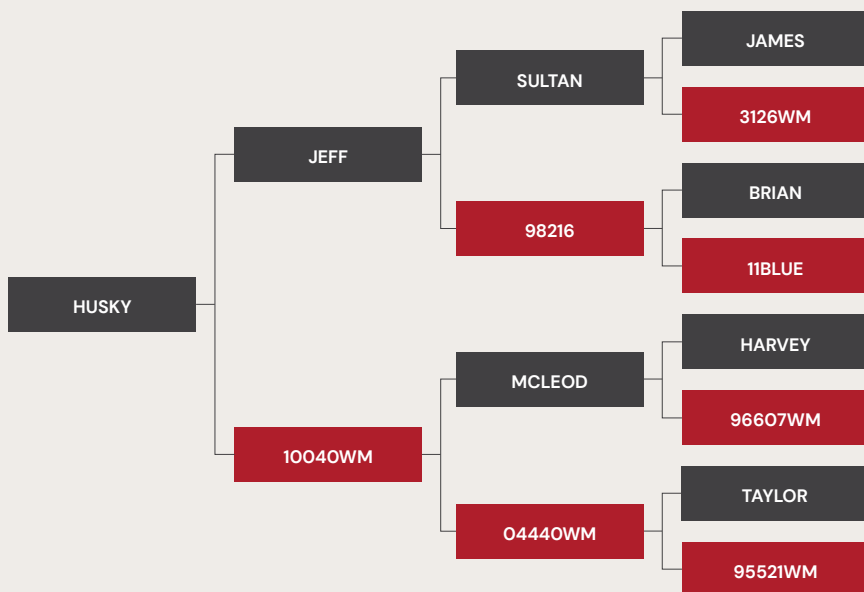

Boris – 3yrs old

Husky

Birthdate: 2016

Husky is a stunning Pure English stag that is pivotal to both our Forrester line as well as our Velvet line. Retained as a 3yr old, he has all the traits we look for in a master sire at Peel Forest. He is as quiet as a lamb, exceptional conformation, high Carla for parasite resilience and cut an impressive 9.41kg at 3yrs. He is truly a pleasure to handle through the yards and is leaving outstanding progeny in his wake. The future of Peel Forest is bright with Husky's influence filtering through.

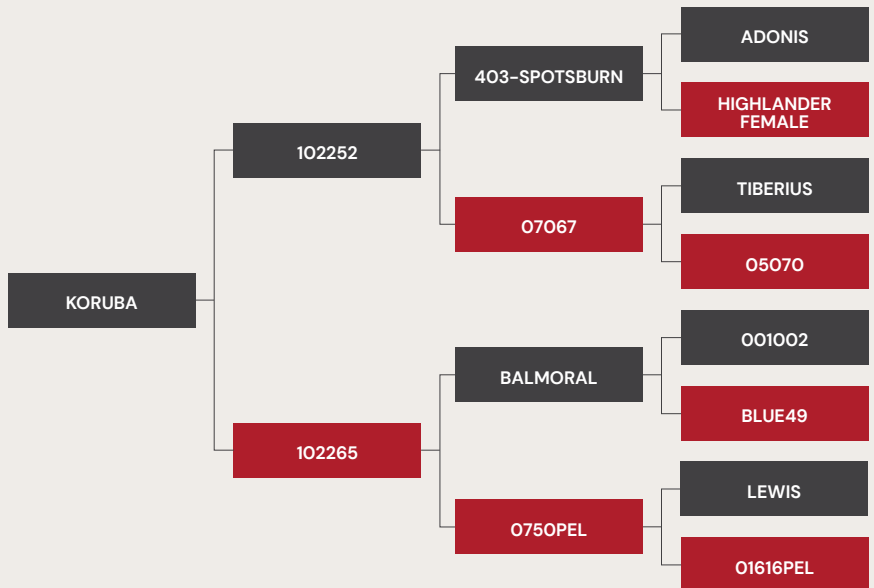

Koruba

Birthdate: 2013

Koruba put his hand up as a sire when he cut a perfect 10.1kg of velvet at 4yrs out of the commercial line. (see photo). At the 2020 Nationals Koruba came second in the Open Red section cutting 14.12kg with massive beam circumference of 32/28cm.

In 2020 he cut 15.89kg and 12.6kg of regrowth with a total yield of 28.49kg for the season.

Rawata

Birthdate: 2015

Rawata was purchased from Arawata Deer Stud as a 2yr old where he cut a lovely 6kg velvet head. He moved up to Peel Forest and cut a stunning 8.8kg head at 3yrs. We were extremely impressed with his temperament. He is a super quiet, friendly stag. At 5yrs of age he cut an impressive 13.49kg. Used in both the Forrester and Velvet lines he is influencing these bloodlines with great promise, with one of his 3yr olds cutting 11.41 kg of tidy velvet in 2022 (lot 2).

With him continually cutting +12kg of velvet he is a true sire for us at Peel Forest.

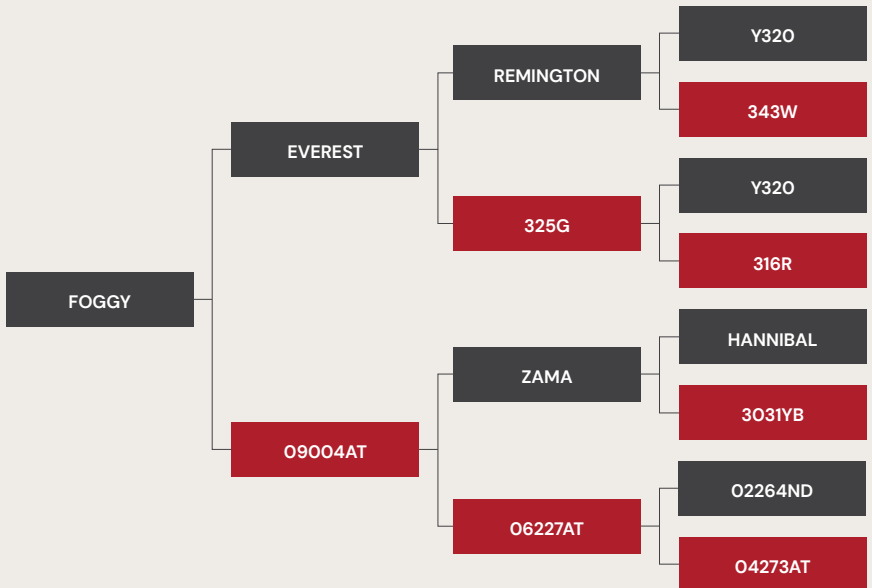

Foggy

Birthdate: 2013

Born in 2013, Foggy (52-13) was purchased in partnership by the Pearse, Hood and Robert's Families from Altrive Stud at the 2017 sale.

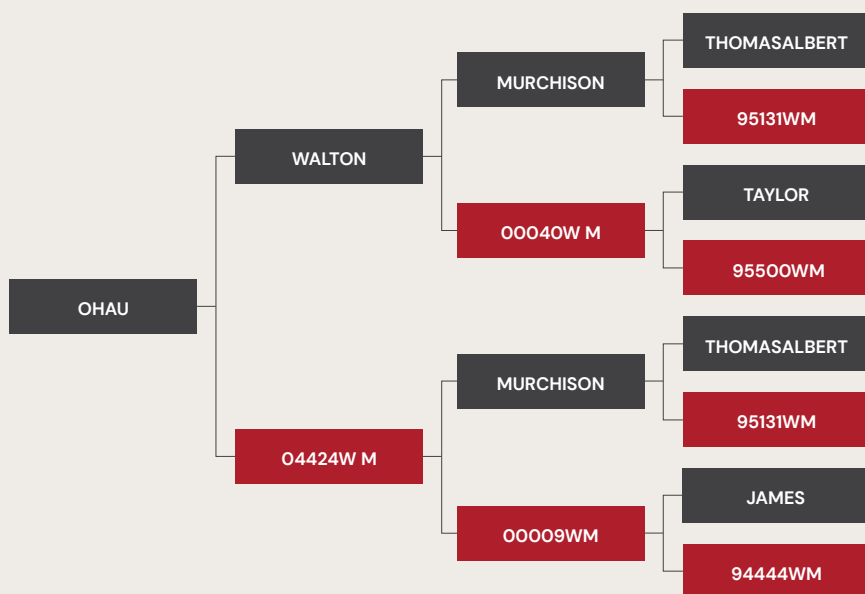

He was Lot 1 and cut an impressive 8.3kg as pictured here. Foggy also came 2nd at the National Velvet competition with this 3yr old head. We had the opportunity to buy some semen and used him over some of our best Windermere bloodlines in an ET programme.

We had a very successful flush ending up with 20 males who averaged 7.99kg at 3yrs old. One of which cut 11.2kg (Enzo) who we sold to the Ruperts'.

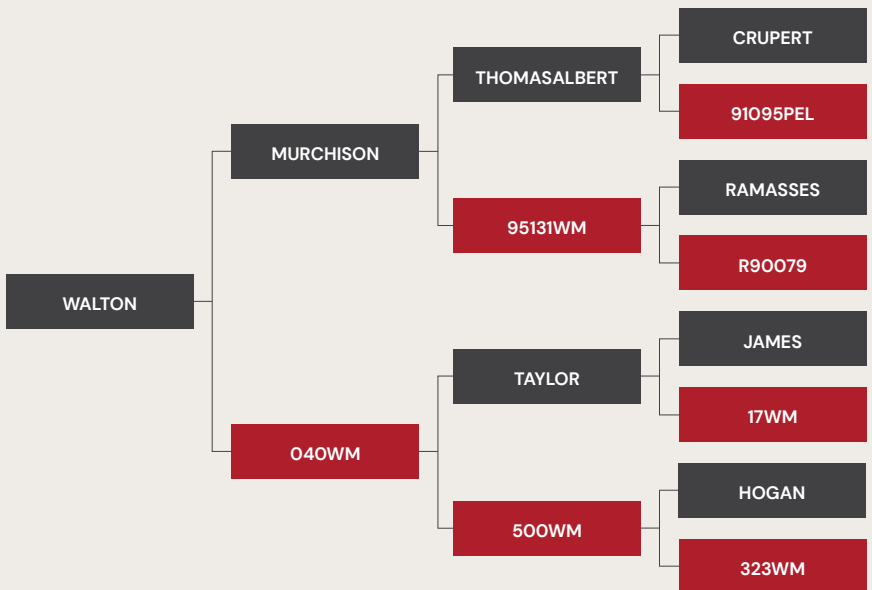

Ohau

Ohau is a Pure Warnham that we sold to Hamish Smith at Bendhu Station at the 2016 sale. At 3yrs he cut a very clean 6.8kg. The following year Ohau went on to cut a very nice 9.4kg at 4yrs (cut very early) and we decided this stag was too good not to use so we purchased semen from Hamish and used him in our stud. The stags on offer in this catalogue are the outcome of this. We find these Warnham's really do breed to type and you can pick his progeny without even looking them up. Ohau is now producing some massive velvet cutting a whopping 14kg in 2020 at 7yrs of age.

Walton

Walton is undoubtedly one of the most outstanding stags to ever come out of the Windermere stud. He is a Pure Warnham with very clean, heavy velvet with excellent heritability leaving some powerful young stags in his wake. Walton won the National Velvet Competition as a 2 year old cutting an impressive 5.8kg of SA velvet. At 3 years he cut 8.06kg SA2 and 4 years 9.9kg of SA2. At 7yrs he cut 12.6kg SA2 of very clean velvet.

Fenton

Birthdate: 2019

Fenton shows impeccable velvet style with impressive weight. His velvet epitomizes competition standards, boasting correct spacing, and very thick beam measuring 28cm in thickness at 4yrs and cutting 8.8kg at 3yrs and 13kg at 4yrs. He exceptionally symmetrical and pristine antler conformation

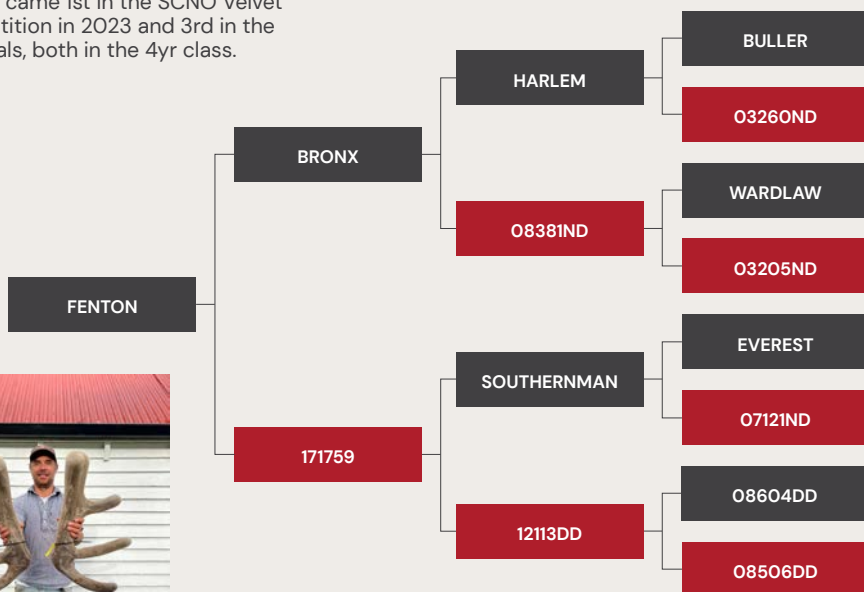

Within his pedigree lies a prestigious lineage of sires, featuring the illustrious Bronx paired with a Southerner hind, and the esteemed Delmore Deer genetics on the lower side. 12113DD is a full sister to Quinn and O8506DD is the Dam of Quinn.

The infusion of these distinguished bloodlines promises to revolutionize your own herd, yielding generous rewards with thick, immaculately clean, and clean grades of velvet.

Fenton came 1st in the SCNO Velvet competition in 2023 and 3rd in the Nationals, both in the 4yr class.

Fenton - 4yrs old

19-2004

Birthdate: 2019

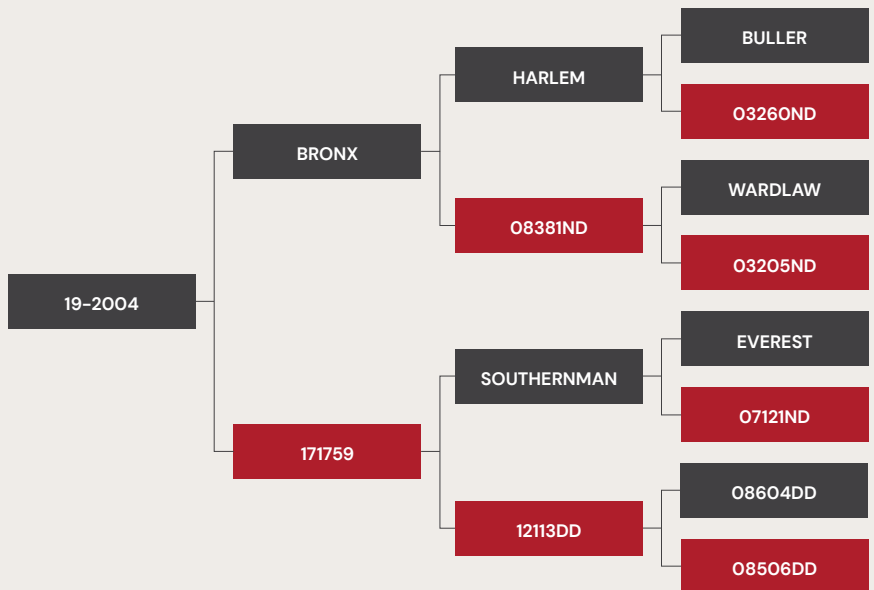

Full embryo brother to Fenton, he shows impeccable velvet style with impressive weight. His velvet epitomizes competition standards, winning the 4yr old Nationals in 2023 with an impressive 10.97kg head. He also came 3rd in the 4yr old class at the SCNO velvet competition in 2023.

He has correct spacing, thick, beam and symmetrical antler conformation.

Within his pedigree lies a prestigious lineage of sires, featuring the illustrious Bronx paired with a Southerman hind, and the esteemed Delmore Deer genetics on the lower side. 12113DD is a full sister to Quinn and O8506DD is the Dam of Quinn.

19-2004 - 3yrs old

This stag was withdrawn from the Forrester Auction (Lot 30) as he has produced a magnificent velvet head, injecting him to lot 1 in this January sale. He is a real multitasking stag with growth and size to go with perfect velvet. Rangì is producing some seriously nice velvet, similar to his 10.17kg 3yr old head. 734's velvet is thick, round and symmetrical. It froze a little funny with a slight buldge out the back which wasn't there when cut.

Very clean, even velvet with lovely round tops. The little point coming out the back is in a very unusual place and I suspect this was caused from a knock during velvet growth. I'd be very surprised if this ever came back. Nice cross with Rawata over Windermere bottom line. Dam 15127 has one other son cutting 8.05kg sold in the 2021 sale.

3yr Velvet

SELLING AS A 4yr OLD, cutting an impressive 12kg of clean velvet this is a massive head. He had an impressive 9.26kg head last year and we used him. Decided to sell him this year. Very similar cross to lot 2, proving Rawata crosses with Walton extremely well. 13048 has another son cutting 11kg consistently in our commercial herd.

Pure Warnham/Woburn stag with very clean, round velvet. We have had great success crossing Husky with Walton and will continue to do this. 962 has decent stat's for growth for an English stag and parasite resilience too. Great stag. Surprisingly, this is O8805's first stag.

3yr Velvet

SELLING AS A 4yr OLD. 820 put his hand up out of the commercial herd and thought we should offer this to the market. He is a PURE WARNHAM stag with a very attractive pedigree. Dam 14019 has a 3yr old this year cutting 7.56kg of really nice velvet and only reason he didn't make the sale was due to being lame. 19820 has thick 25cm beam and also cut a nice 8.06kg last year at 3yrs.

Super clean, tidy velvet hence why he made the sale. He also made the sale for his bloodlines. Pure Warnham/Woburn stag with McLeod being the only Woburn element. Husky/Walton crosses are working very well.

Buyer..... Price.....

Semen for sale

NB: 19-2004 is subject to collect

Directions

Directions to Peel Forest Estate from Christchurch:

Follow State Highway 1 through Ashburton south to Hinds. In the middle of Hinds turn right at the sign to Peel Forest, then 2nd left at sign to Peel Forest travelling along Hinds Arundel Rd approx. 15km.

At the "T" junction turn left onto Highway 72, go over to Rangitata River and then immediately turn right to Arundel. Up the hill and turn right to Peel Forest.

Directions to Peel Forest Estate from Dunedin:

Travelling north from Dunedin, follow State Highway 1 through Timaru to Winchester, north of Temuka.

Turn left to Geraldine following Highway 72, through Geraldine, veering left after the one lane Orari Bridge, following sign to Peel Forest. Turn left into Peel Forest Rd after Coopers Creek Bridge and travel approx. 12 km.

After the Peel Forest Village roadside sign turn left onto Dennistoun Road, a single lane gravel road with a double row of beech planted on each side. GO straight through the white wooden gates which will be open and continue over to cattlestop into a woodland, up through the trees over the 2nd cattlestop and then fork to your right to the sales complex. Please park in the designated car park.

We look forward to seeing you!

Today more than ever, **service matters.**

For years, farmers have trusted and relied on Woodley's, with good reason.

Offering cost effective nationwide livestock transport – both down the road, or inter-island.

Our dedicated team of drivers deliver a professional customer focused service to farmers transport needs, daily. At Woodley's, we pride ourselves on our no nonsense, get on and do it attitude.

Call us. You won't regret it. You'll only wonder why you didn't earlier.

There's a reason why the best in the world trusts Gallagher.

Peel Forest Estate's two-year-old stag Olympus is a world record holder with his impressive 685-inch stag, a full 50 inches larger than the previous record holder. For an industry leader like Peel Forest Estate, where accurate data capture and comprehensive genetics analysis are paramount, there's no other gear for the job but Gallagher.

Peel Forest Estate uses Gallagher TS12 Livestock Manager and HR5 Hand Held EID Tag Reader.
